Actify SpinFirePro™ 8.0

What's New in SpinFire Pro 8.0??

Actify now offers the newest developments in Digital Design Communication.

Actify have enhanced the capabilities of SFFPro to make it the most advanced digital design communication tool available and have tailored this product to specifically benefit the automotive, aerospace, high technology, industrial automation and discrete manufacturing industries.

SpinFire Professional 8.0 supports files created in any major CAD file format allowing users and their supply chains to use a single software solution thus enabling them to view, measure, mark up and share all major 2D and 3D data formats without needing to purchase and maintain seats of native CAD systems.

This will not only streamline the communication process and allow for paperless distribution of complex design data, but will ultimately result in *increased productivity* and *cutting costs* thus saving *TIME & MONEY*.

New and Improved features of **SpinFire Professional 8.0** include:

- **PMI Annotations** – the ability to display and interact with product manufacturing information annotations and the only product on the market to contain 'forward reading' annotations and utilizes "display priority" technology during 3D dynamic camera rotations to increase readability and improve overall comprehension.
- **Expanded Exploded Animation capability** – new handle based transformations allow for easy drag and drop user view creation and animations.
- **New Application Program Interface (API)** that allows 3rd party developers and end users to create plug-in applications to leverage functions and technology within SFFPro for customized users and vertical industry applications.
- **A new Intuitive User Interface** that features a new layout, grouping, style and logic of the application user interface similar to Microsoft Office.
- Enhanced Markup features for notes and dimensions added to a part or assembly, now can be placed on a surface.
- **Improved Analysis Capabilities** for removing material and retaining material cross-section modes allowing users to choose between a full cross-section view and a profile view.
- **Complete Part Comparisons** between an original model and a second version to highlight added and/or removed material.
- **Save Files to Intel's U3D** format for back-end archiving of design data in PDF format.

As a maintained customer, please visit the Actify website: www.actify.com and follow the prompts to download SpinFire Pro 8.0.

If you would like an information pack on SFFPro 8.0 please contact MASCO and one will be forwarded to you.
